## THE PREVENTIVE MAINTENANCE MONTHLY

TB 43-PS-615

Approved for  
Public Release;  
Distribution is  
Unlimited

MAN! THAT  
SPLIT RING  
COULD'A BEEN  
A DEADLY  
MISSILE!

GOOD  
THING THAT  
TIRE WAS  
CAGED!

JOE  
KUBERT

# KLANG

SEE  
PAGES  
10-11

Avoid overheating, cycling, carbon buildup and extra cleaning. If your MCPS doesn't have air duct openings, install the tent wall modification kit, NSN 4520-01-493-3215. The kit allows you to cut openings in the shelter wall and to add a sleeve to seal around the ducts. Attaching the supply and return ducts to the openings lets air flow freely through the space heater.

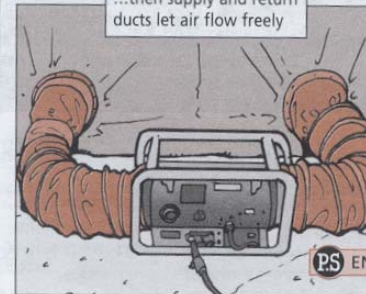

YOU'LL FIND  
COMPLETE  
INSTRUCTIONS  
FOR INSTALLING  
THE KIT IN  
WORK PACKAGE  
0005 OF  
TM 10-4520-  
262-12&P.

You can still use your space heater while you're waiting for the kit to arrive. Just make sure you prop up the shelter wall so it doesn't squeeze the supply and return ducts and restrict airflow.

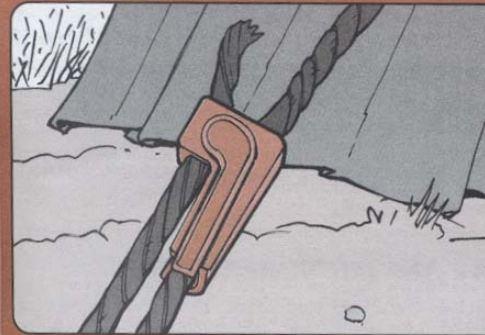

Cut duct openings in shelter wall...

...then supply and return ducts let air flow freely

PS END

## Rope Lock NSN

Use a rope lock, NSN 4030-01-477-0524, to keep a tent rope, loose gear, flight line or canvas cover snug. The rope lock doesn't need continual adjustments once it's secured or fastened in place. This NSN gets a package of 12 rope locks.
